

Government and Government people; are different

Government is a conceived unit which is at the apex of the management of the nation. It is conceived unit because it does not exist physically. It would be protested by many people that every Nation has a set of people controlling the 'affairs of the nation' and they are the 'Government'. It should be understood first that the government people are not 'government'. May be that not many of the readers would digest this argument and explanation. So let us understand what 'government' is.

Government is a unit and entity and set-up to overall manage affairs of a nation. And what nation is? It is explained in other chapter that nation would consist of two constituents (i) the citizen and (ii) the land boundaries. So a government would manage the affairs related to Citizen and land boundaries. It is imperative that for citizen the term 'affairs' pertains to 'Citizen Welfare, delight and safety'. And for land boundaries it pertains to the security of physical entity of the nation. So government has the job of citizen welfare and happiness and as this is being done for others viz. a large number of people, it is rather a responsibility.

So government as an entity has responsibility for citizen welfare and citizen safety. Let us call it Rule 1.

And government, as an entity has responsibility for security of the physical formation of the nation. Let us call it rule 2.

Now government is a unit and entity doing good to others, thus to be totally selfless 'as have NO personal aspirations' and "considering itself- nobody".

It is most important to understand that the government must not have any 'self-centred aspirations' for 'self-centred elevations, expansion and self-centred intensification'. If it would exist, the 'government' as entity, shall drift away from its objectives of 'existing for others'.

However, what we see is, that government is a set of persons'. Let us call them 'Government people- GP'. As an individual GP would be identified along with its position in the government, we term them as GPP i.e. 'Government people and government position'. If we look at the constitution of some nation, these will be Prime minister, Ministers, Members of Legislative houses, bureaucrats etc. Let us term them as HOG, MOG, OIG, MGG in our discussions. Now these 'government people' have the responsibility of making the citizen, millions of people, blissful and flourishing. And doing welfare to millions is not an easy job. **They have to work hard with devotion, consistency and selflessness and they must possess 'exceptional capability, knowledge and intelligence'. But on the contrary they are common persons with typical and normal capability level.**

As a common feature, the 'government people' have the origin of a political party. And political party is formed and sustained based upon a 'hypothesis' and 'philosophy'. It has free the government. The GPP have all the 'authority' and all the 'nation's resources' under their control. They come for a short period and have the uncertainty of keeping the position they hold. They have this unique opportunity of converting 'government powers' and 'Nation's resources' into personally owned resources, so have the option of doing so. The GPP have following factors which may induce selfish attributes in them:

P1: they come for a short period and face uncertainty of holding the position

Basic people's verification Code of Governance: 'Government' and 'Government people' are different

P2: Enormous powers authority and control of nations resources at the disposal of 'common person possessing common attributes' of personal gains.

P3: They are common people with common human attributes of 'insecurity' and 'selfish self-gains'

P4: Converting Nations resources to personally owned resources can be kept hidden

P5: To become more powerful in political party and more powerful than the political rivals for survival in 'environment of uncertainty'.

These factors are the 'Primary factors'. These factors would cause insecurity in GPP and lead to the 'nurturing' of 'personal aspirations for personally owned resources', thus selfish self-gains.

Other secondary factors are:

S1: If citizen are low-intelligent low-knowledgeable and low-educated so that they don't question the government

S2: Government control on justice system and Investigating units

S3: passive nature of ICE/ICONE; the 'Independent Constitutional Entity'

S4: Vague provisions in 'Code of Governance/Constitution' regarding defining responsibility and accountability of each GPP and defining 'Democracy'

S5: Vague provisions in 'Code of Governance/Constitution' regarding defining 'Democracy'

S6: Election System demanding 'pomp and show' and not 'rejection based'

S7: Government control over statistics/data

S8: Existence of 'Masters drudge inapt selfish media/madiak- MADISM and SCAM state of madiak

If S1 to S8 are negative/ low; then there are high probability of P1, P2, P3, P4,P5 to be in existence and GPP orienting towards selfish self-gains.

All these factors are to be strengthened by GPP so low S1 to S8 would show an intention of GPP to possess/driven by P1 to P5 and thus to possess 'selfish gains attributes'.

The GPP would tend to use the term 'Government' to justify whatever it intends to do, especially the improper one.

Although government, as selfless entity, would always do 'utmost citizen welfare' in 'self-less' manner' to the common citizen, GPP may tend to be selfish using 'Government authority' and 'Nations resources' for personal gains. These are in 'grave contradiction' and opposite to each other, thus these two; Government and GPP must be considered separate and different.

The GP since a person, its behaviour and actions would define as to how much it is 'Government' and how much 'it is a person driven by selfish attributes'.

The GPP must make its actions, statements, decisions fully official, transparent and understandable by each and everyone. For this GPP must do the following:

A1: Always announcing decisions and actions from designated official platform of the Government detailing associated responsibilities and accountability (of GPP) under the extent laws

Basic people's verification Code of Governance: 'Government' and 'Government people' are different

A2: Invariably present DAVM and goals and objectives (DAVM signifies; defined –accessible-verifiable and measurable) DAVM is defined in separate chapter

A3: Declared ownership responsibilities of HOG,MOG,OIG,MGG at top level and certification by them

A4: DAVM achievements (and achievable) on timeline with corresponding government expenditure

A5: Declare associates, partners, constituents, actors in the execution/enforcement and consolidation/embodiment of the decision with their responsibilities

A6: Declare web domain where all details regarding 'the GPP/government decision' are available with provision of receiving comments from citizen.

A7: Declare responsibilities for 'failures' for all; owner, actors, associates, partners, constituents as 'individual' and 'person'

If A1 to A7 are fulfilled by GPP then GPP is 100% Government and GPP and Government are same. However, if any one attribute is missing, the GPP becomes 50% Government, as any 'A' missing shall signify GPP's shift towards 'selfish self-gains' and need to be 'severely opposed'. So if any two attributes are missing then GPP is 'anti-Government' and is a person with common selfish attributes.

If three attributes missing, it would be (-)50 and so on. This would signify the GPP approach to possess 'selfish personal goals' and identifying that GPP is "not the government or anti-Government" and GPP should not associate the term Government to justify its actions.
